SNAP THE INTERNET TO ANYTHING – This kit includes the cloudBit plus 5 of our favorite prototyping modules; everything you need to create internet-connected devices in seconds.

Description

SNAP THE INTERNET TO ANYTHING
This kit includes the cloudBit plus 5 of our favorite prototyping modules; everything you need to create internet-connected devices in seconds. Recreate the most popular smart devices, use littleBits to prototype the next billion dollar idea, or invent a project that solves your own, unique problem.Perfect for hackers, designers, makers and tinkerers of all levels–*without* the programming, soldering and wiring normally required.

- Includes everything you need to get started [power included!] right out of the box: 6 modules, wall power and mounting boards
- Connect everything! Now your entire littleBits library can talk to the internet and vice versa
- Build with 5 intro projects, including an SMS doorbell, internet-connected lamp and many more online!
- Automate with IFTTT to connect with any web service, like Facebook, Gmail and Twitter, or hardware like NEST and Phillips HUE
- Remote control and readout to control your circuits across the room or across the world
- Code with the cloud API or using the Arduino module for further customization [optional]

The cloudBit is also available individually here**!** Check out our Tips and Tricks or forumon more ideas on using cloud.

The cloudBit needs a lot of juice, and only works with p3 usb power. Don't worry, the usb power AND a US wall adapter are included in the bundle!
